DEVS

Delegate complex tasks to a swarm of AI agents

The AI Orchestration Platform that delivers what you ask for.

🌐 **DEVS.new**

The Problem

AI promises much, but delivers *"almost"*

> *"Write a 27-page book in Shakespeare's style about love between humans and robots."*

What you get from current AI services:

❌ A 12-page summary
❌ Modern language with occasional "thee" and "thou"
❌ No chapter structure
❌ Incomplete narrative arc

The gap: GenAI services **cannot ensure** that explicit and implicit requirements are met.

Why This Matters

Trust is the barrier to AI delegation

Current State

- AI outputs need constant human review
- No validation of requirements
- Single-agent limitations
- Approximate results at best
- Users stuck in "prompt engineering hell"

The Cost

- **Productivity loss**: Hours spent iterating
- **Missed opportunity**: Can't delegate at scale
- **Frustration**: AI feels unreliable
- **Adoption stall**: Enterprises hesitate

The Trust Barrier

Over half of people distrust AI systems

> *"54% of people are wary about trusting AI systems."*
> *— KPMG & University of Melbourne, 2025*

Why? Because delegation requires predictability.

Simple Delegation

- Context fully known
- Few uncertainties
- Easy to verify

Complex Delegation

- Unknown or inferred context
- Ambiguity in requirements
- Which process? Which methodology?

Single Agent vs Agent Teams

The paradigm shift

Traditional: AI Assistant

- One model handles everything
- Limited context window
- No specialization
- **High cognitive load on you**

DEVS: Specialized Teams

- Each agent has specific expertise
- Clear roles & responsibilities
- Agents collaborate like humans
- **Distributed cognitive load**

Analogy: One person building a house vs. a construction crew with specialists.

Introducing DEVS

The AI Orchestration Platform That Delivers

With three pillars that change everything:

Pillar	What it solves
🎨 Agent Builder	Build & customize AI agents with ease
👥 Dynamic Team Formation	Multi-agent collaboration with real methodologies
📚 Knowledge Integration	Your context, your documents, your rules

Key Differentiators

Why DEVS shines

Feature	Open WebUI	Manus, Perplexity	DEVS
Requirement validation	❌	Some	✅ Built-in
Multi-agent orchestrat.	❌ 1 agent	Basic	✅ Sophisticated
Methodology support	❌	❌	✅ PDCA, DMAIC, 8D...
Privacy	✅ Self-hosted	❌ Cloud-only	✅ By design
Agent memory	❌	Limited	✅ With human review
Knowledge integration	Basic	✅ Connectors	✅ Connectors + sync
Extendable	✅	❌	✅ Marketplace
Open source	✅	❌	✅ MIT License

Pillar 1: Agent Builder

Build your perfect AI workforce

Pre-built Agents

- Product Manager
- Developer
- QA Engineer
- Technical Writer
- Research Analyst
- *...and many more*

Custom Agent Builder

- Define personality & role
- Set instructions & constraints
- Assign tools & capabilities
- Enable agent memory

Pillar 2: Dynamic Team Formation

AI teams that work like real organizations

```
User Request → Task Analyzer → Team Formation → Coordinated Execution → Validated Output
```

How it works:

1. **TaskAnalyzer** breaks down complexity and extracts requirements
2. **Team Builder** recruits the right agents with matching skills
3. **Orchestrator** coordinates parallel/sequential execution
4. **Validator** ensures all requirements are met
5. **Refinement cycles** fix anything that doesn't pass

Real Methodologies, Real Results

Not just chat — structured problem solving

Methodology	Best For
PDCA	Iterative improvement cycles
DMAIC	Data-driven process optimization
8D	Root cause analysis & corrective action
A3	Structured problem-solving on one page
Agile	Adaptive, flexible workflows

Teams form automatically based on task complexity and required skills.

Pillar 3: Knowledge Integration

Your context makes all the difference

Knowledge Base

- Upload documents & files
- Folder watching with auto-sync
- Content deduplication
- Full-text search

Connectors

- 📁 Google Drive
- 📧 Gmail
- 📅 Google Calendar
- 📝 Notion
- *...more coming*

Result: Agents work with *your* context, not generic knowledge.

Architecture

Browser-Native, Privacy-First

No Server Required

- Runs 100% in browser
- IndexedDB for storage
- Service Workers for offline
- Web Crypto for security

Your Keys, Your Choice

- OpenAI
- Anthropic
- Google Gemini
- Mistral
- Ollama (local)
- Custom endpoints

Marketplace Ecosystem

Extensible by design — no coding required

Extension Types

- 📱 **Apps** — Full workflows
- 🤖 **Agents** — Personas
- 🔗 **Connectors** — Services
- 🔧 **Tools** — Capabilities

Zero Barrier to Create

- 🗣️ **Vibe-generate** extensions in natural language
- No coding skills needed
- AI builds it for you

Vision: Anyone — technical or not — can extend DEVS and share with the community.

Market Opportunity

The AI agent market is exploding

Market Size

- **$5.5B** AI agents market (2024)
- **44% CAGR** through 2030
- **$47B** projected by 2030

Source: Markets&Markets, G.V. Research

Why Now?

- Multi-agent research maturing
- Enterprise AI adoption accelerating

DEVS targets: Power users, developers, SMBs, privacy-conscious enterprises.

Business Model

Sustainable open-source

Tier	Target	Model
Free	Individuals	Open source, self-hosted, unlimited
Pro	Power users	Hosted at DEVS.new, premium features
Enterprise	Organizations	Priority support, SSO, custom deployment
Marketplace	Creators	Revenue share on premium extensions

Philosophy: Core is forever free. Premium = convenience + support.

The Team

Arnaud Leymet

Founder & CEO

- 🎯 18+ years building platforms
- 👥 45+ engineers mentored
- 📱 30M+ app downloads
- 🔄 20M+ daily API requests

Track Record

- 🗣️ Speaker:
  GitHub Universe, Google Next
- 🏆 Best chatbot tech
  (Microsoft, 2017)
- 🚀 3 successful exits (acquired)

Current: Principal Engineer @ France's #2 telco (23M customers)

Traction & Status

Launching now — join the wave

✅ Shipped

- Full AI orchestration engine
- Agent memory with HITL review
- Knowledge base + connectors
- P2P sync across devices
- Marketplace architecture

🚀 Coming

- Public launch campaign
- Community building
- Extension ecosystem
- Enterprise pilots

Status: Production-ready. Seeking early adopters and contributors.

Open Source Commitment

Built for the community, by the community

- 🔓 **MIT License** — Use freely, modify openly
- 👥 **Community-driven** — PRs welcome
- 📖 **Transparent** — All code visible
- 🌍 **Multi-language** — 6 languages supported
- ♿ **Accessible** — Keyboard nav, screen readers

The Vision

Democratizing AI delegation

> *"A world where AI augmentation isn't a luxury for the few, but a fundamental tool available to all — where anyone can leverage the power of AI teams to amplify their capabilities."*

The impossible becomes inevitable.

Start Delegating Today

Try it. Break it. Contribute.
